

Preview News, NAB 2006

24 – 27 April 2006, Las Vegas

Bright Systems' booths: SL3800 with MTI Film
and SL517 with Digital Vision

Bright Systems Debuts BrightDrive at NAB 2006

And Demonstrates Powerful Media Sharing for Data-Centric Digital Post and DI

Reno, Nevada, 20 February 2006, www.4bright.com: Bright Systems, Inc., a leading developer of file server and infrastructure technology for the post production industry, will be showing its new BrightDrive family of high performance shared media solutions for the first time at NAB 2006. Based on pioneering advances in infrastructure technology, BrightDrive sets new standards in collaborative digital media sharing, content delivery and workflow efficiencies.

Visitors will see demonstrations of BrightDrive's powerful media sharing capabilities across Ethernet and fibre channel networks as operators work on the same massive data files at the same time. By allowing concurrent users simultaneous access to files across multiple platforms and in any format to 4k and beyond, customers will be able to make significant reductions in time to completion.

The BrightDrive range is fully scalable to meet the specific requirements of each application, and can be integrated easily with existing infrastructures. Every installation is delivered with the BrightDrive Data Management Suite which comprises Data Mover, Data Optimizer and Data Wrangler, as well as secure, remote distributed system diagnostics to ensure reliable, consistent and uninterrupted high performance. Bright Systems offer a simple migration path from video-centric workflow requiring minimum or no operator retraining.

About Bright Systems

Bright Systems was founded in 1999 to design and develop advanced infrastructure systems for data-intensive environments. Based in Reno, Nevada, a centre associated with important milestones in the development of video disk recording, Bright Systems provides a range of extremely high-performance file servers capable of record/playback of real-time uncompressed video and data streams. With its unique expertise in advanced engineering and facility integration/workflow, Bright Systems is able to deliver a significant competitive edge to the post production industry. www.4bright.com
